Waiting Time Performance

Sandwell General Hospital has the highest average wait time, showing a major patient flow issue compared with other hospitals.

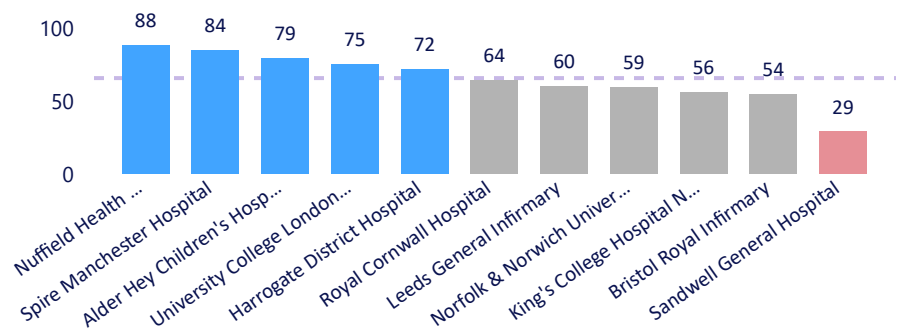

Which hospitals have higher readmission risk?

Sandwell General Hospital records the highest readmission rate, indicating a higher risk of patients returning within 30 days.

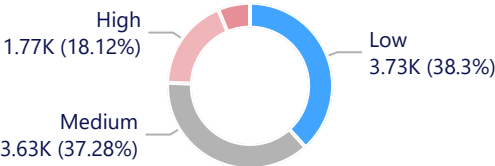

Where are patients most dissatisfied?

Sandwell has the lowest satisfaction score, showing the impact of operational pressure

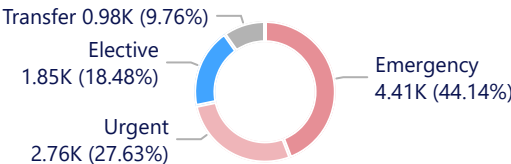

Patient Severity Distribution

75% of patients are low or medium risk, while critical cases require focused resources despite lower volume.

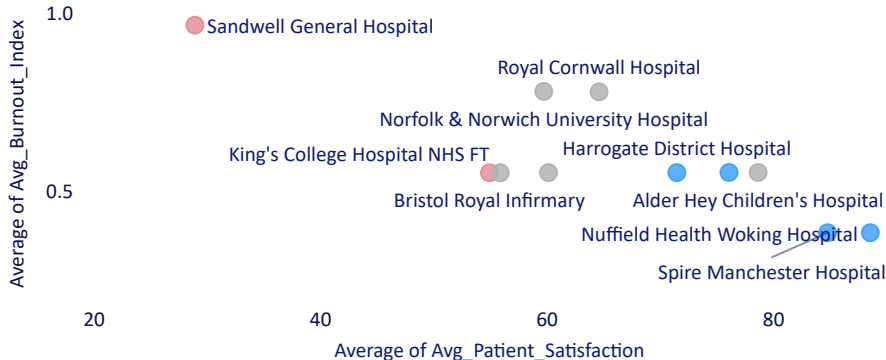

What type of admissions create the most emergency demand?

Emergency admissions drive the highest patient demand, creating the greatest pressure on emergency services.

Does workforce burnout affect patient experience?

Sandwell General Hospital is a clear outlier, recording the highest burnout index (0.96) and the lowest patient satisfaction score (28.9), suggesting workforce strain may be affecting patient experience.
