Dataset

Hospital Readmission Analytics — Dataset & Findings

Dataset: UCI Diabetes 130-US Hospitals (2000–2008), 101.77K encounters, 72K patients

Readmission: 11K (11%) within 30 days | Avg LOS: 4.5 days

Admission Type: Emergency (6.2K) readmits ~3x more than Urgent/Elective/Unknown

Top Diagnoses: Diabetes, then Heart Failure — far ahead of others

Age Group (30-day readmit %): 20-30 highest at 14%; 70-90 at 12%; rest ~11%

→ Younger adults readmit more than elderly — counter to expectation

Gender: Female 54% / Male 45%

LOS by Readmit Status: <30 days: 4.8 | >30 days: 4.5 | No: 4.2

Limitations: No cross-hospital readmissions tracked; some missing fields; data is 15+ years old

Tools: Power BI, Power Query, DAX
